INTRODUCTORY

OFFICE OF
BERGER BROS.
PHILADELPHIA

TO THE TRADE

In presenting our Annual Catalogue for 1894, which fully illustrates our extensive line of Supplies, we do so with the kindest regards to our patrons who have favored us with their orders during the past year.

We take great pleasure in announcing that we have the largest plant of Tinnerns' Hardware and Roofers' Supplies in the country, which places us in a position to ship orders without delay.

We will endeavor to retain the good will of the trade by our usual prompt attention and producing the best goods at lowest prices. Anticipating increased demands of trade, we have added new goods to our extensive line of Supplies, also increased our plant, which gives us better office facilities and more storage room.

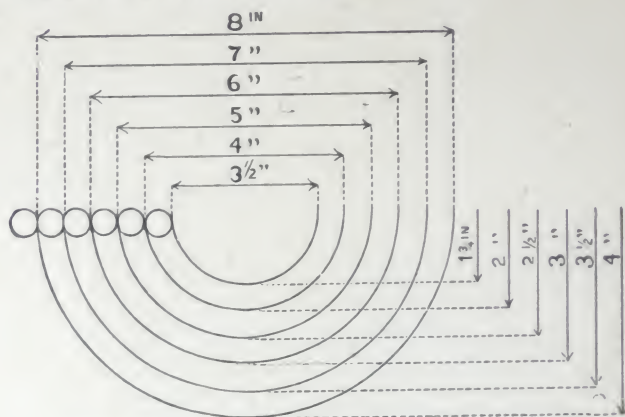

Trusting we will merit a continuance of your favors, we are,

Very truly yours,

BERGER BROS.

BERGER'S PATENT SLIP JOINT GUTTER.

Patented January 12, 1886, and January 17, 1888.

Roof with Berger's Patent GUTTER and HANGERS.

Best in the World.

Showing the open gutter, free to expand and shrink, no stems or cross-bars to stop the flow of leaves or rubbish. The hangers give the trough a strong, panelled appearance. A gutter of this kind will last many years, costs the least, and pays for itself in the additional width it gives to the projection of the eaves. Leading architects now plan their buildings, wherever possible, for this style of gutter. In many sections of the country almost every gutter is hung on the outside, hung with the Berger Hangers, where no other hangers are now kept in stock or could be sold at any price.

Note, since the Berger Hangers are so perfect, complete, handy, cheap, ornamental and well known, there is no further need or excuse to cause the owners of buildings a waste of money and future annoyance and expense in the construction of costly concealed gutters.

Shank style Nos. 10, 11 and 12 are used in all parts of the United States. Nos. 7, 8, 9 and others are used only in certain sections, according to custom, either driving them in the cornice or screwing them on the mouldings. The Gem Circle, for standard gutters, is used in all parts of the country, and the Penn Circle in certain localities only for double-beaded gutters. The Standard Circle is also used only where preferred, and for gutters where the metal is connected and continued up on top of the roof.

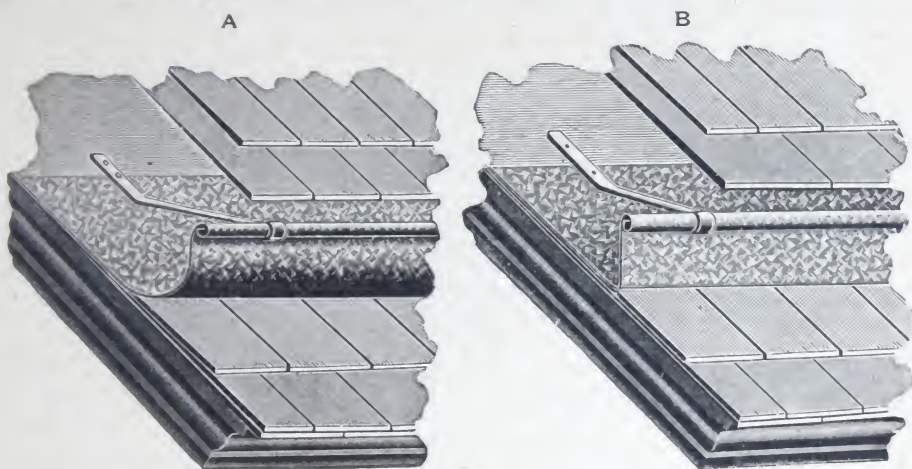

For Hangers, see page 10.

ROOF GUTTERS.

Made in 8 Foot Lengths, of Galvanized Iron and I X Terne Tin.

The following engravings show two styles, A and B, Roof Gutters. The hangers are applied in such a manner as to leave no exposed nail or screw heads, (as cuts readily show); therefore there can be no leaks from splitting or nail holes, as in the old-style way with wood fronts and wood brackets.

These Gutters are by far the best produced, and are sold at such prices that make them as cheap as those made of wood, lined with tin.

PRICE LIST.

BERGER'S GREAT FAVORITE GUTTER HANGERS.

The most successful HANGER ever invented. More sold than all other kinds combined.

The only perfect open gutter Hanger in existence.

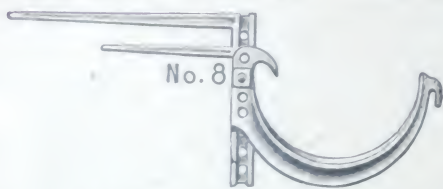

Patented October 13, 1879.

Patented August 11, 1885.

Patented July 6, 1886.

No. 7 is made to drive from 3 to 4 inches square in the cornice. The lower prong forms a brace for the upper, and makes it very strong and firm.

No. 8 is made to drive from 3 to 6 inches square in the cornice.

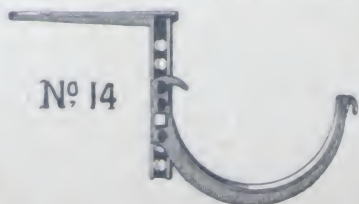

This iron is intended for eaves where the shingles project far over the cornice.

No. 9 is to drive with the pitch of the roof. Same length as No. 7. Suited for narrow molded cornice.

No. 13 drives with the pitch of the roof. Same length as No. 8.

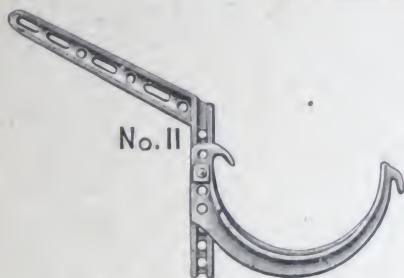

No. 14 is made to drive in brick or stone fronts.

For prices see page 11.

THESE HANGERS MAKE THE GUTTER EXCEEDINGLY STRONG AND ORNAMENTAL.

ARCHITECTS INDORSE THEM EVERYWHERE. THE ONLY HANGER TO LEAVE AN OPEN, CLEAR, EXPANDING GUTTER.

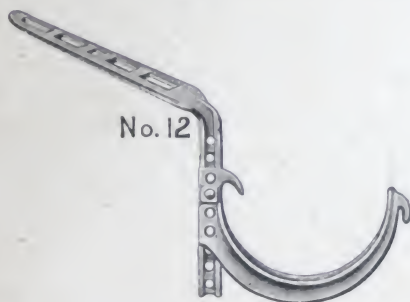

NO TOOLS NEEDED—EASILY PUT UP.

No. 11

No. 11 is especially adapted to barns, mills and factories, where the rafters are exposed. The shank is nailed to the side of rafter, assorting the 4, 6 $\frac{1}{4}$ and 9-inch shank to correspond with the amount of fall required. If more fall is desired, use the extension shank, to bolt on the end.

For Hinged, see No. 18.

No. 12

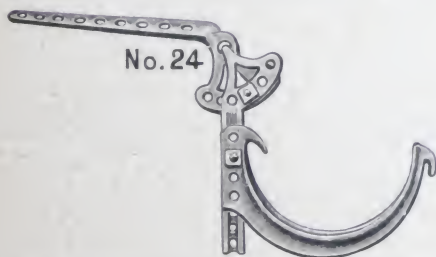

No. 12 is made $\frac{1}{4}$ pitch to fasten under the shingles or slate, and are bent to suit the pitch. The holes on top of the shank are made beveling so that the nail can be driven at any point and enter the shank.

No. 15 is made for flat roofs.

No. 25 for steep roofs, half pitch.

No. 17 is Hinged for any pitch.

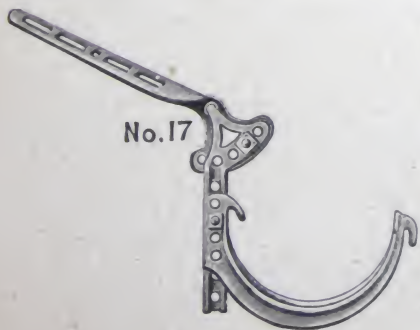

See No. 17 below.

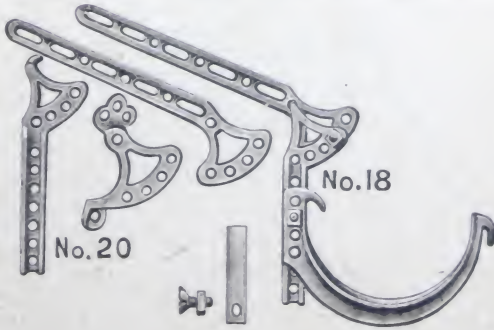

No. 24

No. 24 is Hinged to bolt on corrugated or other iron roofs, for awnings, mills and factories.

Note the Hinge and Circle, both adjust to every $\frac{1}{8}$ of an inch.

No. 17

No. 18

No. 20

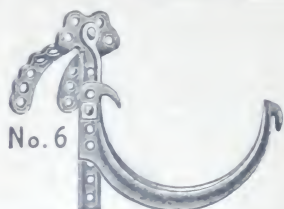

BERGER'S GUTTER HANGERS—THE HANDIEST AND BEST EVER INVENTED.

TRY THEM AND BE CONVINCED.

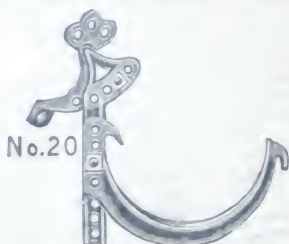

No. 10

No. 10 is made to nail against square box cornices, and is specially adapted to barns, mills and factories.

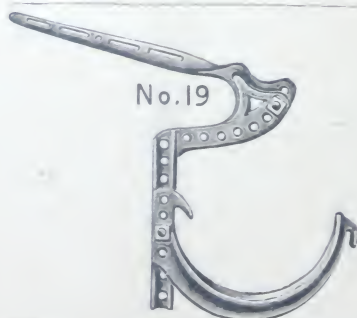

No. 6

No. 6 is made specially to nail against O. G. moldings. The two stays are made to fit in the cove and can be bent to suit any variation.

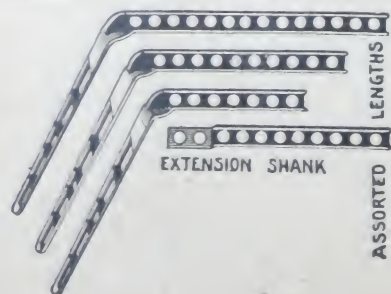

No. 20

No. 20 is Hinged for any pitch, can be nailed or screwed to various shaped moldings at any angle desired.

No. 19

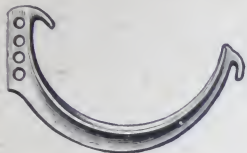

No. 19 is used either on top or under the shingles and suited for short projections of the shingles over the moldings.

ASSORTED LENGTH.

All orders are filled with assorted length shanks unless otherwise ordered.

AGENTS FOR J. R. BAKER'S

IMPROVED GUTTER HANGER.

This is not an untried article. Most of the trade is already acquainted with it. The convenience in using this hanger will save enough hard work and time to pay for all the hangers used. For repair work its wonderful convenience is especially realized as it can be so easily put on without taking the trough down, and make just as good a job.

Our goods are made in a workmanlike manner and of the best quality of material. The strap that goes underneath the trough is of heavy galvanized iron, the balance of the hanger is of strong hoop iron. All goods fully warranted.

We pack them in one gross boxes, and furnish one pair of pinchers (made expressly for the purpose), with the first order.

Hangers furnished for any size troughs. In ordering, state width of trough across the top inside the bead.

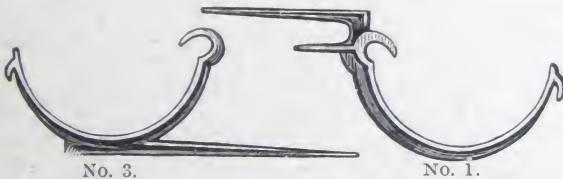

The straps that fasten to the roof are sent in nine different lengths. The pitch of the trough is easily regulated.

The indisputable advantages of the BAKER HANGER make it the cheapest to use.

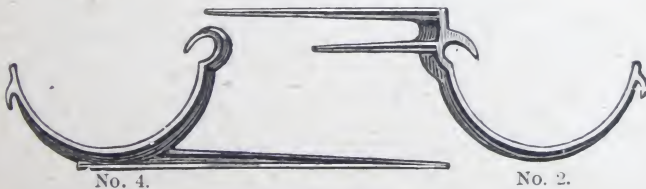

All orders receive prompt and careful attention. Correspondence solicited.

DISCOUNT.....

This Fastener must be seen and used to be appreciated, and is destined to supersede every other device now in the market.

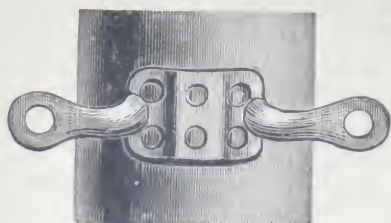

It can be soldered or riveted on all kinds and sizes of pipes, and used either end up, right or left hand, or in any other position desired, and allows enough variation to let the pipe slip together till it is tight in the joints, as all pipe should be to prevent rattling. Needs no close measuring on the wall to find a joint for the drive, and combines a handy, perfect, solid, concealed fastener in every respect.

The racks being long, with clips at each end to solder, lessens the strain, and are not liable to become loose. The drives being made in various lengths and styles, does not require a large assortment to fasten pipes to wood, brick or stone, to any distance from the wall, and is just the article wanted for every purpose.

METALLIC

Cresting Block and Finials.

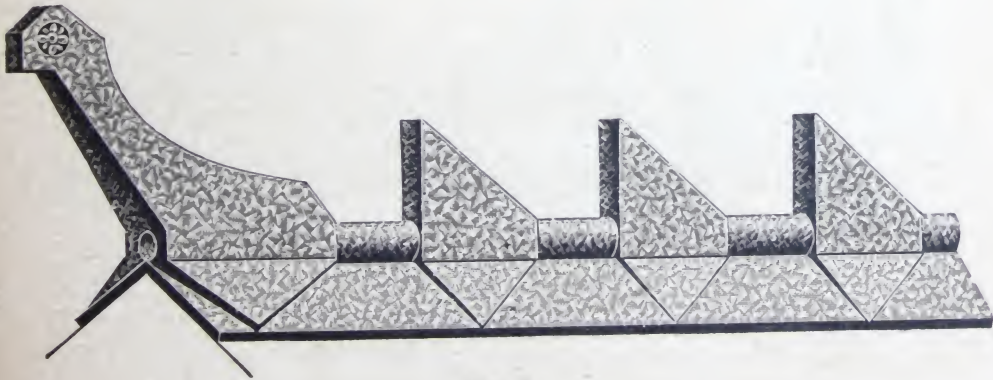

Made of Galvanized Iron to Fit Two (2) Inch
Ridge Roll.

The Only Adjustable Cresting Block Made.

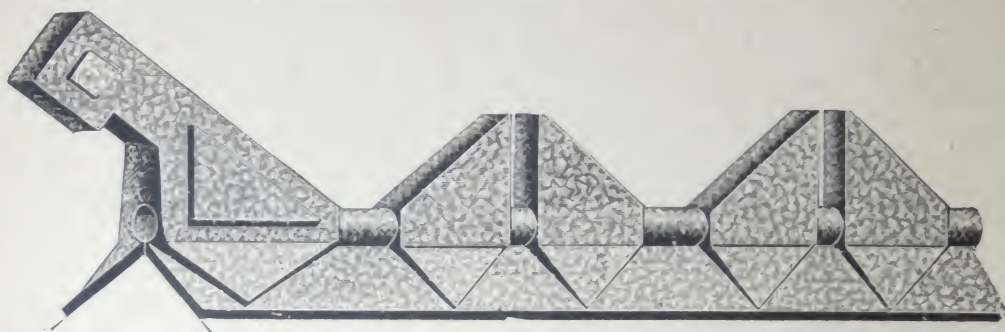

The Cresting Block is intended to meet the requirements of Roofers, Contractors and Builders for a cheap Ornamental Ridge Cresting, and will be found to be the cheapest Cresting Block on the market. In using this Block it is not intended that it should be soldered to the ridge roll, but simply slipped over top of the roll and, after spacing as required, nail through lower flange of Block, using a small wire nail for this purpose. The nail used in fastening Cresting Block also answers for the purpose of holding ridge roll in position on the roof.

Following cuts show Blocks placed on ridging in five different positions, each imparting a different appearance. Can be placed so as to show over 20 different forms upon the ridging, thus answering the purpose of so many different styles.

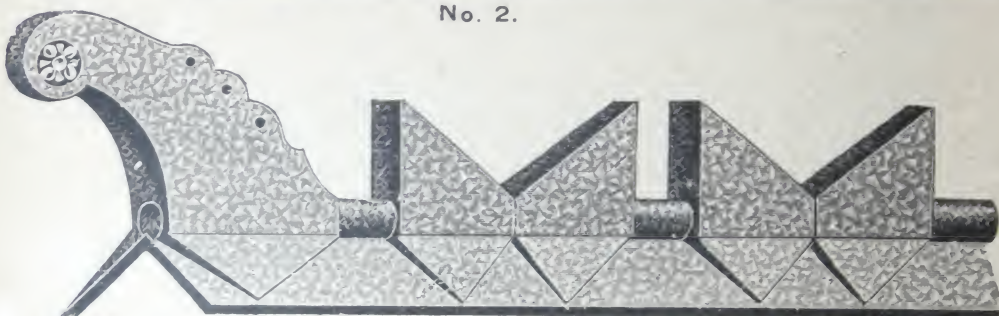

Size of Block, 6 inches long by 5 inches high from top of roll.

READY ROLL

Continuous Tin Roofing

For Double Seaming.

Of Special Interest to Tanners and Roofers.

This Roofing is made of Soft Steel Roofing Tin, well coated, size 20 x 28, locked and soldered together the 20-inch way, *painted on under side*, and finished in rolls (securely wired), containing enough to cover 100 square feet of surface, when laid with Double Seamers $1\frac{1}{4}$ inches and 1 inch high.

Per Square.....\$.....

V CRIMP ROOFING.

Costs less than any other Metal Roof manufactured, and for many purposes is as satisfactory as more expensive kinds. Made of best quality Box-Annealed Semi-Steel (not iron). Painted on both sides with the best Iron Oxide Paint, ground in pure Linseed Oil.

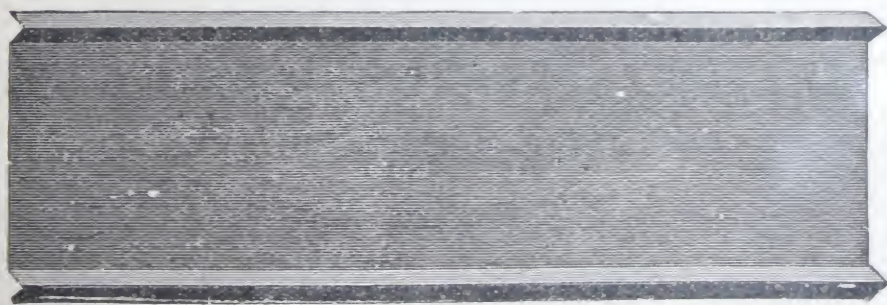

FIG 37.

We recommend this roof to those wishing a good, cheap and durable roof, for Barns, Warehouses, Sawmills, Cotton Sheds, etc.

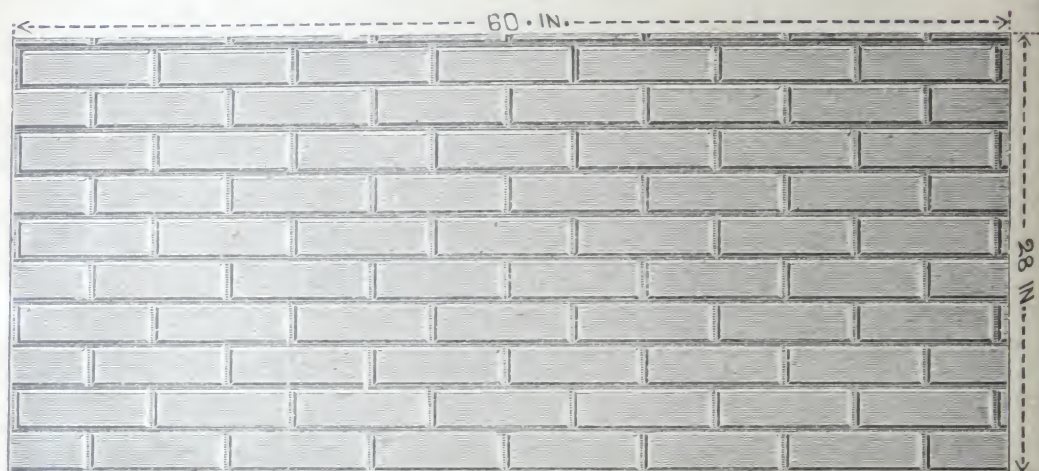

No tools are required for laying V Crimp Roofing, except a Tinner's Snips to cut the sheets, and a hammer to nail with.

Fig. 37 shows sheet of our pressed V Crimp Roofing as shipped. Sheets will lay 24 inches from center to center of crimps, and furnished in 5, 6, 7, 8, 9 and 10 foot lengths.

One square consists of $6\frac{1}{4}$ sheets 24 x 96 or equivalent, and will lay one square less the lock or lap at end of sheets.

Berger's Imperial PRESSED STEEL BRICK.

MADE OF SHEET STEEL, PAINTED.

Patent Pending.

Shows Pressed Steel Brick Siding Ready for Application.

It can be applied by any mechanic; it lays perfectly smooth, and after painting cannot be distinguished from finest Philadelphia Pressed Brick.

Costs **no more** than best wood siding and about **one-fifth** that of brick.

In beauty of appearance, durability, cheapness and as a protection against fire, we claim this Siding has no equal.

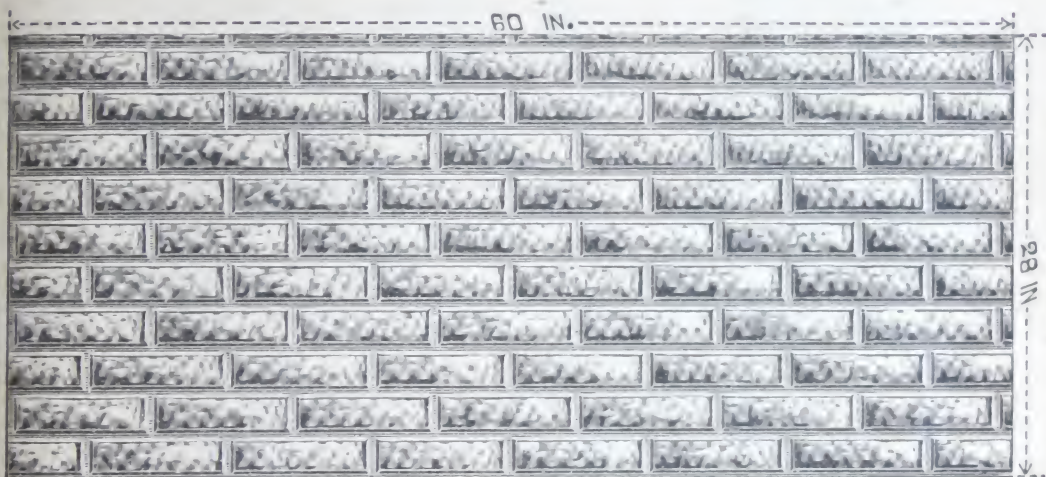

Most Insurance Underwriters give this style of covering same rating as Brick or Stone.

Manufactured of the best Soft Steel and shipped in lengths of 60 x 28 inches, containing 11 $\frac{2}{3}$ square feet to the sheet.

A Square of Imperial Brick Siding consists of 8 $\frac{1}{3}$ sheets, 60 inches long by 28 inches wide, painted both sides, and will weigh 70 pounds.

BERGER'S PATENT Rock Face Brick Siding.

CHEAP.

Entirely New in Sheet Metal Siding lately placed on the market by our company. We feel confident that Architects, Builders and Property Owners will see the advantage of using this pattern for outside covering on buildings, in preference to the old styles, Corrugated, Beaded and other metal sidings on the market.

On a building the counterpart of a finely finished Rock Face Brick; making the most attractive and desirable facing yet produced or offered to the building trade.

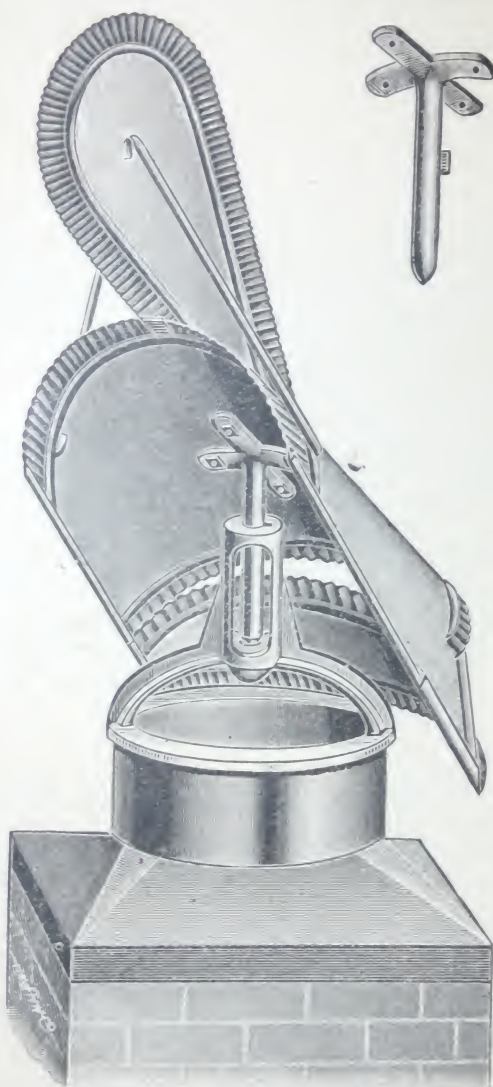

A Square of Rock Face Brick consists of $8\frac{1}{2}$ sheets, 60 inches long by 28 inches wide, painted both sides.

Weights per square are as follows: Steel (painted), 70 pounds; Galvanized Iron 85 pounds; Copper, 90 pounds.

 In ordering Plain or Rock Face Brick Siding, allow 4 to 6 square feet to the 100 for laps.

AGENTS FOR IWAN'S VOLCANO REVOLVING AND VENTILATING CHIMNEY TOP.

THE BEST IN THE WORLD.

Patented.

The improvement of this top consists therein that the hood has an open back as shown by the above cut. At the same time the chimney is fully protected from rain and snow, and the currents of wind cannot suck downward into it.

But to the contrary, when the wind passes through the sloped opening of the hood, it blows the smoke upward, whereby it creates and assists the draught. The construction of this top is simple, and the improvement very great. Send for a trial order. We guarantee every top to give entire satisfaction.

THE GLOBE VENTILATOR.

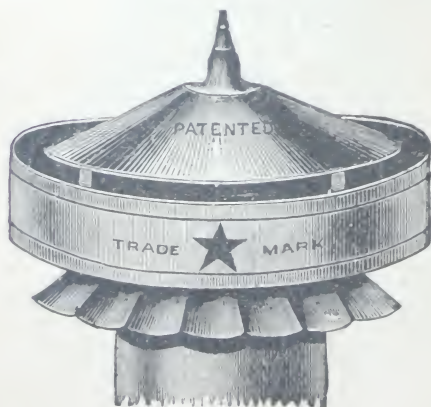

The Globe Ventilator is the best in the market. This cut shows the application, its handsome and graceful appearance. Simple in design and made of the best iron and in the best manner possible.

By referring to the cut it will be seen that air striking the upper and lower dome from any direction is deflected, forming an exhaust in the ventilator, compelling the air in the flue to rush toward the head to fill the vacuum.

New Convex Registers and Ventilators.

FOR SHALLOW FLUES AND THIN PARTITIONS.

With or without Cast-Iron Wall Frame, to which the Register is attached by Screws.

When the ordinary flush register obstructs the flue, this new style will be found very useful.

When desired, this register can be used as a ventilator for cord fixtures.

To change a register to a ventilator, remove the screws holding face at wheel end, adjust pulleys and replace screws firmly.

Size of Opening.	Black or White Japanned.	Bronzed to imitate Gold, Copper or Bronze Metal.	Nickel Plated.	Face Japanned.	Face Bronzed.	Wall Frame.

STANDING SEAM ROOF IRONS.

Patented Oct. 31, 1893.

PRICE LIST.

No. 1.	Per 100, net.....	Galvanized. \$8 00
" 2.	"	6 00
Discount.....	

This novel device is designed to do away entirely with either snow rails or gutters formed on the roof to prevent the snow from sliding down, or the necessity of boring holes through the metal in order to provide suitable fasteners for snow rails; if spaced reasonably close, no rails will be needed, and when rails are preferred no better and more artistic fastener could be provided. Being made of best malleable iron, they are clamped directly to the standing seam by clinching the lugs through the seam.

NOTE.—We also make the same style No. 2 to rivet on flat wrought iron bars for slate roofs.

Any tinner can readily see the advantage and value of this invention, in making a quick and perfectly air-tight joint in metal collars around cast vent or other pipe extending above the roof.

Note the clamp is placed slightly above the edge of the collar, and then calked or puttied in the recess.

BERGERS' PATENT TRUCK

A GREAT LABOR-**SAVING** INVENTION.
THE HANDIEST AND BEST IN EXISTENCE.

Patented Dec. 11, 1888.

A FIRST-CLASS TRUCK AT A VERY LOW PRICE.

No Business House Can Afford to be Without Them.

Every Enterprising and Pushing Manager Should Have Them.

THIS Truck will save its cost many times over in your store. There's nothing like having things handy, and if you can do your work with less labor and heavy lifting by a handy tool and a boy, you are using a principle by which men grow rich, because you are **SAVING MONEY**.

NOTE.—You can move barrels and packages with broken bottoms without either lifting, spilling, or soiling your hands and clothing. Rolling them on their sharp ends jars your building, strains and cuts your floors.
